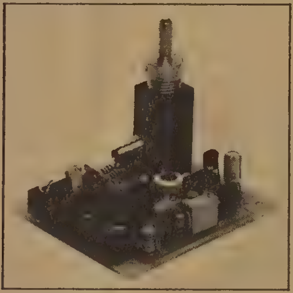
OEM PRODUCTS

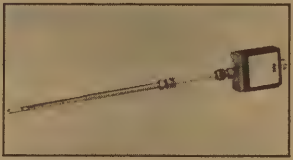
Kurz manufactures a wide line of basic airflow and mass flow transducers and is always eager to work with you on your OEM product requirements.



SERIES 501
Micropower Mass Flow Meter
The 501, the worlds smallest commercial mass flow meter, measures flows up to 5 slpm. The 501 is perfect for biomedical toxicology and instrumentation applications.

SERIES 565
DC Powered Mass Flow Meters
The compact 565 Series include linear 0-5 VDC outputs and are most often specified for flows from 10 sccm to 10 scfm. Popular with OEM's, the economical 565 operates on 15VDC.

SERIES 435DC
Linear Air Velocity Transducers
Powered by 15VDC, and available in self contained, bare board with cable and rack mount configurations, the 435DC features a linear 0-5VDC output.



SERIES 430DC
Air Velocity Transducers
Powered by 15VDC, the self contained 430DC features a non-linear 0-5VDC output.

SERIES 430DC-VF
RS422 Frequency Output DC Powered Air Velocity Transducers
The 430DC-VF features a RS422 compatible output where 12KHz to 60KHz corresponds to zero to full scale. The high frequency output allows two-wire runs to lengths of several miles. The 430DC-VF operates on 15VDC, has 15 ft. of probe cable and a NEMA 1 electronics enclosure.

SERIES 280
Micropower Mass Flow Controlled Air Sampler
A miniature flow controller, the 280 combines the worlds smallest commercial mass flow meter, the 501, with the worlds smallest rotary carbon vane vacuum pump, the Series 290, to produce a compact, mass flow controlled, air sampler. The 280 can also function as a mass flow controlled gas supply, and can be computer controlled via an external setpoint feature.

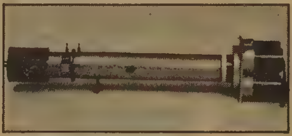
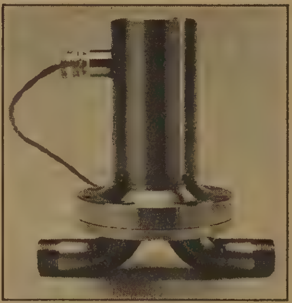
AIR VELOCITY

SERIES 415
2-Wire Linear Air Velocity Transducers
With linear 0-5 VDC outputs and 2-wire runs to over 1,000 ft., the popular 415 provides an industrial grade application solutions anywhere air flow is measured.



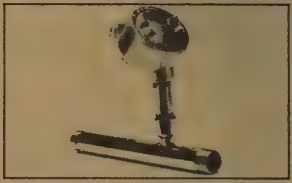
SERIES 400
Air Velocity Calibration Systems
Complete benchtop wind tunnel systems for calibrating a variety of air flow instrumentation and sensor.

SERIES 455
Stack Velocity Transducer
The 455 is designed for operation in the harshest environments and features Kurzs new all metal sensor.

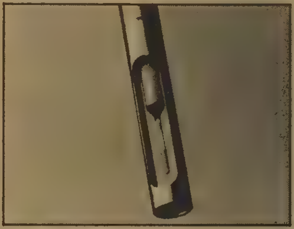


SERIES 730
Electric Rotary Ramp Metering Valve
A major breakthrough in valve technology invented by Dr. Kurz. This exclusive valve features single turn operation and a linear Cv from 0 to 100% of flow. The **730** Series valves alone allow new achievements in precise mass flow control.

MASS FLOW



SERIES 505
In Line Mass Flow Meters
Previously complex measurements are now made simple with Kurz mass flow sensors. Linear outputs, 2-wire hookups, NBS calibrations, corrosive gases—the 505 Series does it all!



SERIES 515/555
Insertion Mass Flow Meters
For larger pipes, the economical 515 Series includes a ball valve/retractor assembly designed for hot tapping into existing lines. Weld on the fitting, drill a hole in the line, insert the probe and you're ready to go!

MASS FLOW CONTROL

Kurz **7500** Mass Flow Control system are composed of a Kurz **505** Series Mass Flow Meter, a Kurz **710** Series Electric Valve P.I.D. Controller and a Kurz **730** Series Electric Rotary Ramp Valve.

Buy by the numbers. Buy #1

Today multilayer ceramic capacitors (MLC's) are being sold in greater numbers than ever before. In fact, they make up over 60% of all the capacitor units sold in the industry. And, out of all these, AVX Ceramics is the leading manufacturer worldwide.

Here's some other impressive numbers. Follow them to link up with AVX MLC chips (1A•1014), SpinGuards (1A•1011), DipGuard (1A•1013), molded axials (1A•1012) and SkyCaps (1A•1010) listed in this catalog. For military radials and axials (1B•1008) and for military DipGuards and chips (1B•1009).

To locate the right MLC for your application, just follow the numbers. They'll lead you straight to number one.

qualified products lists-2440

"Qualified Products Lists" are issued periodically by the U.S. Government as a guide for the procurement of electronic components by government contractors. Each list contains every separately designated part that has qualified under the latest Mil. Specification for its class and the name(s) of the Manufacturer(s) of each.

EEM is publishing the names of those North American companies that are qualified producers of one or more products in each of the lists that apply to a selected group of electronic products normally cataloged in these pages. Addresses for these companies will be found in the EEM yellow pages.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

MIL-W-22759

JUDD WIRE ZELRAD™

ZELRAD™ by Judd Wire is an irradiation cross-linked modified ethylenetetrafluoroethylene (ETFE) insulation that meets or exceeds the stringent requirements of the hook-up and airframe wire specification Mil-W-22759.

Light weight in construction, reliable in applications, ZELRAD is an ideal product for industries involved with general aviation, commercial aviation, military aviation, military vehicles, or black box equipment.

ZELRAD is available as hook-up wire in single extrusion constructions rated at 150° C, 30-12 AWG. The double extrusion airframe styles are rated at either 150° C or 200° C, depending on style, in 26-4 AWG.

PRODUCT ADVANTAGES

WIDE TEMPERATURE OPERATING RANGE — ZELRAD is rated by the military for continuous operating temperatures of from -65° C to 150° C or 200° C, depending on style. This wire is also required to be tested at 300° C for seven hours to demonstrate accelerated aging of the wire and assure crosslinking of the insulation.

RESISTANCE TO HEAT AND SOLDER IRONS — The irradiation crosslinking of the wire insulations create a surface that will not melt or flow when in direct contact with a solder iron. This process also substantially improves the abilities of the wire to withstand drastic changes in surrounding temperature conditions.

CHEMICAL RESISTANCE — ZELRAD's ability to withstand degradation when in contact with all aircraft fluids, fuels, lubricants, and solvents is demonstrated by the testing required within specification Mil-W-22759, paragraph 4.7.5.17.

ABRASION AND FLAME RESISTANCE — ZELRAD routinely excels in the cut through and abrasion tests to present its users with a durable, tough, high temperature wire. All wire styles manufactured by Judd Wire have shown spectacular results in testing for the flame retardancy required by this specification.

SIZE AND WEIGHT ADVANTAGES — The irradiation processing allows superior results with insulation thicknesses as small as .006" and corresponding space and weight savings through reduced diameters.

MARKING AND HANDLING — ZELRAD combines its durability with ease in handling as it can be paid off from reels or drums into automated cut and strip machinery, or prepared by hand. ZELRAD can be extruded in all basic colors, or custom marked and striped.

Discrete Lamps

The **A.N.D.** LED lamps are offered in three intensity ranges. The standard bright, the super bright and the ultra bright.

Standard Bright Lamps

These lamps are intended for use in a wide variety of high volume, high quality, low cost applications. The all-plastic molded lens provides a light-weight and compact unit suitable for use under the most adverse conditions.

Super Bright Lamps

These lamps offer high intensity light output in four colors (RED, GREEN, YELLOW and ORANGE) and three sizes (T1, T1¾ and T1¾ Low Dome). With the wide range of radiation patterns available, these lamps are suitable for an equally broad range of applications including front panel indicators, sign boards and fault indicators.

Ultra Bright Lamps

These lamps are the result of extensive improvements in material formulations and modified lens design. The effect of these improvements is vastly improved light output, yet current and voltage levels remain consistent with conventional LEDs.

READOUT ASSEMBLIES

MINI-PAK DISPLAY ASSEMBLIES

The MINI-PAK^{R} series are gas discharge or LED readout modules, specifically designed for use on low-to-medium volume industrial or commercial instruments. The display and associated electronic drive are packaged in a black thermoplastic case available in two styles; a rear panel mount and a front panel mount. The modules are available in 1½-, 2-, 2½ and 3-digit configuration that can be mounted individually or stacked horizontally to form any number of digits. The MINI-PAK^{R} series are designed for direct interface compatibility with TTL or LSI integrated circuits with 4 line output information in the 8-4-2-1 BCD code format.

GAS DISCHARGE SERIES CE-1000/CE-2000

The MINI-PAK^{R} series CE-1000/CE-2000 include a 0.55" high character gas discharge display and the BCD to seven segments Decoder/Driver. The interface terminals are brought out to 14 pin dual-in-line header or socket. All components are soldered to the P.C. Board.

GAS DISCHARGE SERIES CE-3000/CE-4000

The MINI-PAK^{R} series CE-3000/CE-4000 include a 0.55" high character gas discharge display and socket mounted BCD to seven segments Decoder/Driver. The interface terminals are brought out to wire wrap pins. The gas discharge display can be very easily and efficiently replaced, thereby, minimizing down time.

LED SERIES CE-5000/CE-6000

The MINI-PAK^{R} series CE-5000/CE-6000 include a socket mounted 0.43", 0.625" or 0.8" character high LED display, a socket mounted BCD to seven segments Decoder/Driver and current limiting resistors, whenever applicable. The interface terminals are brought out to wire wrap pins. The series is available with or without latch or in 5 mA, 15 mA or 20 mA per segment.

BASIC FEATURES

Bright, Uniform Characters provide a major advantage…particularly when the display is to be viewed at a distance.

Easily Driven—Uncomplicated drive circuits minimize overall cost. Dale can provide the "intelligence" including drive circuits required for various display packages.

Easily Customized—The special and/or personalized informative formats you wish to present can be provided at reasonable cost.

Aesthetically Superior—Soft neon glow provides exceptional contrast and reduces segmented appearance of characters.

DRIVE LOGIC NOTES

The 68X32 & 68X33 Series use SN7448 (TTL) or 4511B (CMOS), BCD to 7 Bar decoders which drive ULN2003A, 7 channel darlington drivers.

The 68X36 Series employs the same decoders and drivers as the 68X32 & 68X33 Series. For added reliability, these are arranged in a dual-parallel circuit with each decoder-driver powering half of the lamps that light each segment.

As with all CMOS devices, options with user driven inputs must be switched high or low during operation.

The logic supply current for TTL options is 55ma, typ., per digit except for the 68X36 Series and the 68X31 Series with J lamps where 110ma per digit is required.

* *With CMOS logic options, the display will blank if the BCD input is greater than 9.*

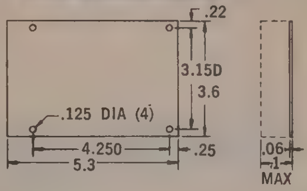
SYSTEM INTERFACES POWER SUPPLIES

GENERAL

DIO-REY has developed a wide variety of standard system interfaces for its numeric/alphanumeric readouts and lighted indicator/annunciators. These are the result of over 12 years experience in serving a broad spectrum of ndustries including instrumentation process ontrol, communications, metals, chemicals, ata processing, agriculture, security, office equipment, petroleum, auto, aerospace, textile, packaging, paper, transportation, governmental agencies and military.

These products may also be used in systems which do not require displays. In addition, custom interface electronics, designed to perform outside the specifications or capabilities of our standard units are available. Contact our sales department for technical application assistance.

820 SERIES SERIAL ASCII INTERFACES



The DIO-REY 820 Series Serial to Parallel and Parallel to Serial Converters are microprocessor based and are primarily intended for driving remote display decoders.

The input to the 820 Receiver is a Serial ASCII coded data stream at either RS232 or current loop levels. The 820 Receiver automatically adapts itself to incoming data rates over the range of 110 to 1200 baud. In addition it features a six position DIP switch which allows selective addressing of up to 64 separate receivers on one data link. The output of the receiver is six bits of data and sixteen strobe lines. The receiver, therefore, can drive either sixteen numeric or alphanumeric displays per receiver or up to 96 points in an annunciator system.

The 820A Transmitter accepts parallel, 7-bit ASCII (monocase) and converts it into a serial data format (RS232 or current loop) compatible with the receiver. Alternately, an array of sixteen, 6-bit registers may be sequentially inputed to the 820B Transmitter and converted to the same serial output, for annunciator systems.—See EEM pg. 3•1159 (in Section 2325) for further data

Part Number	Interface Code	Description	Transmission Mode
820-1	—11	Serial ASCII Data Receiver	EIA RS232

LAYOUT SHEET FOR DIO-REY 82000 SERIES LIGHTED INDICATORS

Units which combine two or more of the standard module sizes can be supplied in attractive, integrated assemblies. To determine the assembly that will meet your requirements, just follow these steps: 1 — List the information (Words, Numbers, Letters, Symbols, etc.) to be displayed and then lay it out on a 3/8″ square grid. (A vellum or onion-skin overlay on the grid pattern printed on this sheet may be helpful for this purpose.) 2 — Choose lighted legend or lighted background for displayed information. 3 — Select the module sizes that will meet your display requirements and block them in on the layout. If you need a larger lighted area than is available from a single module, combine modules. 4 — Add a 1/8″ bezel around the light module layout to obtain the overall appearance of the display unit. 5 — Choose the color(s) for the lighted areas. 6—Choose a LED/lamp, considering Power Available, and Ambient Light Intensity from **Table 2, Page 1B•1041.—At this point, or if applications engineering assistance is required earlier, contact our office or your area representative.**

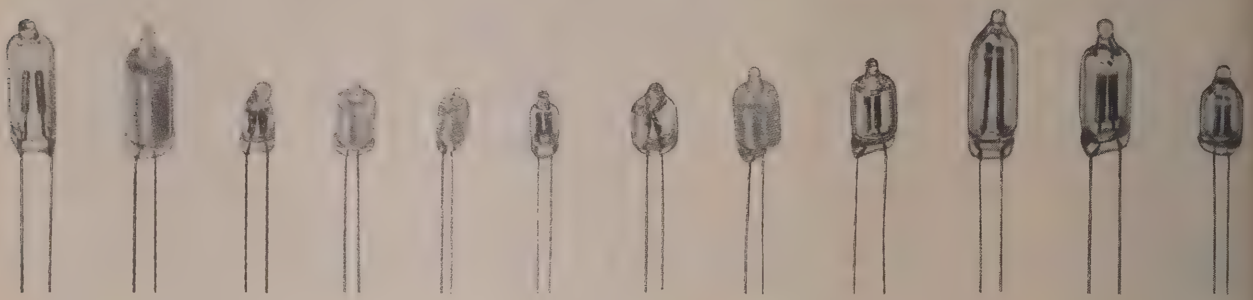
Neon Glow Lamps

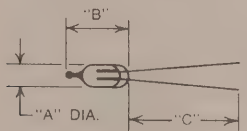
Neon lamps are ideal for line-voltage AC as well as for 90V and up DC applications. They are rugged and long-lived; properly specified neon lamps will outlast the equipment in which they are incorporated.

IDI 4900 series neon lamps have tinned leads, and are ideal for use on printed circuit boards. Unique sizes, colors, and voltage characteristics provide a wide range of options.

Plain glass lamps include both standard brightness and high brightness types, and include a unique high-current lamp for greater light output and a unique high brightness low voltage lamp. Green, blue, and amber lamps have a phospher coating on the inside of the glass envelope to convert the typical orange-red neon glow to other colors, and are available in both miniature and sub-miniature sizes.

A wide variety of complete panel-mounted neon indicator lights is listed in the "non-relampable" section of this catalog. Several PC Board-mounted neon assemblies are in development; please let us know if you have specific needs.





(SEE TABLE FOR DIM'S)

NOTES:
1. Leads are Tinned.
2. DC life is 60% of AC life.
3. All lamps must be ballasted.
4. All lamps may be used on higher voltages with appropriate value resistor in series.
5. Max. firing voltage when lamp is new, for high brightness lamps voltage increases as lamp ages.
6. Voltage measured across lamp at design current.

Tiny-Mite™

FEATURES

- Attractive
- Compact
- Easy lamp insertion and removal
- Economical

TINY-MITE indicator light assemblies and sockets feature a unique socket construction which holds the lamp securely, makes contact reliably, and will not loosen with vibration or shock, yet permits easy lamp removal and replacement.

TINY-MITE 4600 Series indicator light assemblies are extremely attractive, rugged, and reliable, yet utilize minimal panel space. TINY-MITE 4100 Series sub-miniature wedge-base lamp sockets are available in both lead and solder terminal versions, as well as in a printed circuit board version.

Sub-miniature wedge-base lamps evolved from the design originally developed for miniature (T-3-1/4) lamps. The ruggedness and reliability of wedge-base lamps has been proved by the annual use of hundreds of millions of units. Wedge-base design is economical because the base is formed from the glass of the bulb and lead-in wires. There are no separate parts or extra welded connections. There are 13 different types presently available with voltage ratings ranging from 2.5 volts to 28 volts.

Non-Relampable Indicator Lights

DI non-relampable, or unit-construction, indicator light assemblies are compact and attractive. They are essentially tamperproof and have outstanding reliability due to the elimination of sockets and spring contacts. In addition, IDI non-relampable indicator light assemblies are extremely economical to buy and install.

Omni-Glow 1000 SERIES

GENERAL PURPOSE INDICATOR LIGHTS

- Available in five lens shapes and two body sizes.
- Neon models incorporate appropriate current-limiting resistors.
- A choice of wire leads or quick connect terminals.
- Lights can be easily mounted by either push-on speednut or snap-fit into a .500 (12.70) dia. hole.
- UL Recognized — CSA Approved.

Rugged and long-lived, OMNI-GLOW Indicator Lights usually outlast the product on which they are used. Conservatively rated, the neon lights will function in excess of 10,000 hours — and often much longer. Depending on usage, the incandescent models can also provide outstanding performance. Tamper-proof housing and elimination of sockets and spring contacts — along with intrinsically rugged shock-proof design — all combine to provide outstanding reliability.

OMNI-GLOW Indicator Lights are compact and economical. They take little space on your panel or behind it and make modest demands on your budget.

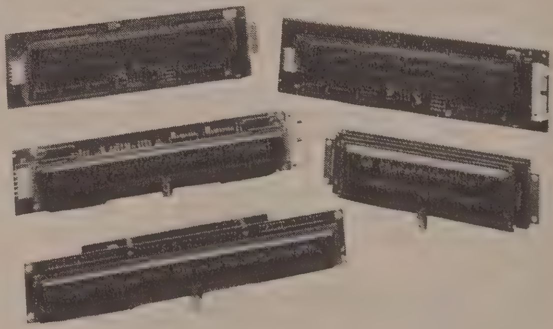
THE ARGUS™ GAS PLASMA FAMILY PEP™ INTERACTIVE TOUCH DISPLAY

These compact DC plasma display modules, some with interactive capabilities, revolutionized an entire industry. They utilize neon-orange or green 5x7 dot matrix plasma panels and integrated support electronics to produce bright, easy to read alphanumeric characters. U.S. ASCII and several European font sets are available, or optional custom programmed (masked ROM or EPROM) font sets can be provided at additional cost. Multiple lines (2, 4, 6, 8 & 12) of 16, 32 and 40 characters per line are standard with character heights of .21, .26 and .33 inches. A simple TTL level, 64-character 7-bit ASCII interface scheme is utilized (6 bits for characters, the 7th for cursor control). Most models contain on-board control, memory, and refresh electronics, further simplifying the interface task. Direct memory access (DMA), synchronous, asynchronous and individual character entry modes are all provided as standard features. Data rates of 40,000 to 750,000 characters per second are possible depending on the model and interface method chosen. Careful attention has been paid to packaging, resulting in very compact modules. ARGUS display life normally exceeds 30,000 hours, depending on application and environment. A wide range of accessories, including filters, power supplies, and serial data converters round out the current ARGUS Family. Low cost, "minimum logic" ARGUS MPX™ modules compatible with competitive product lines are also now available; and, the newest members of the Family, ARGUS AIM™, provide the user with 8-bit bus interfaces and low-voltage operation.

THE FLIP™ VACUUM FLUORESCENT FAMILY

These vacuum fluorescent display modules feature bright (100fL) blue-green characters filterable to blue, yellow, green or red. A wide variety of models use a 5x7 or 5x12 dot matrix format to display alphanumeric data along with European, scientific or custom characters. Available, 14-segment models allow display of upper case for low-cost applications. Single and multiple line displays are available with character heights ranging from .2" to .59". All FLIP modules operate on +5VDC only, and most are less than 1" deep. Each unit has a self-contained microprocessor and accepts both serial and parallel (8-bit bus) ASCII data. A number are drop-in replacements for competitive products and several are priced at under $100 in production quantities. The FLIP Family's latest additions are a line of extended temperature range models which operate from −40 to +85°C (−40 to +185°F). New models are frequently added to this growing and compatible line.



THE DAYSTAR™ LIQUID CRYSTAL FAMILY

Members of IEE's newest and fastest growing alphanumeric family, these low power, compact Liquid Crystal Display Modules are ideal for battery operated portable equipment, especially when sunlight readability is a must. Low-cost DAYSTAR single and multi-line displays are available as ASCII modules which interface easily to a 4 or 8-bit data bus. The new "unique to the industry" DAYSTAR NOVA line features large (.33 inch to .5 inch) characters, wide operating temperature (−30° to +85°C), and optional electroluminescent backlighting for night viewing. They operate on a single 5V power supply. Coming soon is a graphic LCD panel capable of up to 16 lines of alphanumeric data. Infodex CRT Displays include a wide range of standard sizes, capabilities, and features that encompass most needs of builders of military, industrial, and medical equipment. Custom models are also supplied in single or production quantities to satisfy individual requirements or provide special features. Recent applications for Infodex displays include:

MILITARY (MIL SPEC)

Flight simulators, Automatic carrier landing systems, Radar bomb directors, Weapons system trainers, Airborne and ground based electronic warfare systems.

MEDICAL

Ultrasonic diagnostic systems, X-Ray film recording (e.g., CAT scanners), EKG monitors, Nonfade cardiac monitors, Pulse monitors, X-Ray image intensifiers.

INDUSTRIAL

Graphic slide and film recorders, Engine analyzers, Television monitors, Oceanographic displays, Computer output graphics, Waveform monitors.

Most Infodex OEM displays are supplied as compact one piece assemblies, without enclosures, for direct installation behind control panels. Screens up to seven inch diagonal are typically flat face, and include both magnetic and electrostatic deflection amplifiers, video amplifiers, and high voltage power supplies. The only connections needed to use circuits are low level video and sync inputs, or X and Y deflection signals for random access displays. Units may be supplied to operate from 12, 15, 24, or 28 Vdc sources within user equipment, or from 110/220 Vac.

Custom displays may be variations of standard designs to provide special electrical or mechanical features, including repackaging to fit unusual or restricted spaces. Even completely new custom designs enjoy a head start based on our experience in solving CRT display problems for an extremely wide range of applications.

In military and medical applications, there can be no tradeoff on reliability, yet continuous operation is common at elevated temperatures and high humidity, and technical maintenance is often unavailable on site. Some techniques we have developed to deal with these hostile environments include:

- Sealing and encapsulating high voltage components to permit safe operation under conditions of 100% humidity, *with* condensation.
- Mechanical designs that can support tubes and deflection yokes to prevent damage or misalignment by severe shock and vibration.
- EMI shielding through the CRT faceplate, combined with optical filtering to enhance contrast in high ambient light conditions, while simultaneously avoiding fog due to condensation at 100% humidity, and permitting easy field replacement.
- Functionally separate replaceable modules that are designed for safe, easy fault isolation and fast replacement in the field.
- Diagnostic output signals that indicate normal conditions within the equipment, or the presence and location of a fault.

Light measuring instruments permit accurate measurement of peak and average luminance, spot size, line width, contrast ratio, and modulation transfer function in accordance with accepted standards.

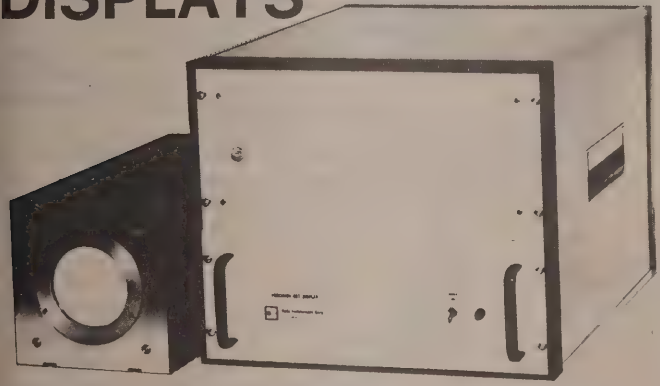
INFODEX DISPLAYS ARE COST EFFECTIVE

Standard models and standard subassemblies are kept in inventory, and can be quickly assembled or modified for fast delivery. Many designs have already been environmentally tested. Many special designs have already been delivered to users in production quantities.

THE RESULT

Infodex customers get reliable, proven CRT displays that can meet all applicable specifications, in less time and at lower cost than in house designs.

PRECISION X-Y CRT DISPLAYS



Infodex Precision CRT Displays are high performance X-Y displays that combine high resolution with accurate deflection, fast settling, and high stability. They are used in precision display applications such as:

- Film recorders and hard copy recorders
- Precision radar and sonar displays
- Computer output graphics displays
- Flying spot scanners
- Precision television monitors

PD series displays use magnetically deflected flat face cathode ray tubes with small deflection angles to achieve small spot size with minimum geometric distortion. Spot growth is minimized by dynamic focus, and electronic linearity correction is used to improve deflection accuracy and minimize pincushion distortion.

The displays are capable of random access X-Y deflection precisely proportional to X-Y input voltages (±5V full scale) at all rates from dc to the maximum specified bandwidth. Options include sawtooth and raster generators and PPI (rho-theta) generators for internal generation of deflection signals.

Spot intensity is controlled by separate unblanking (on/off) and video (analog) inputs. Options include phosphor protection circuits that blank the spot whenever writing speed drops below an adjustable minimum value, and gamma corrected video amplifiers that linearize the relationship between video signal amplitude and spot intensity.

PD displays consist of separate CRT and electronics assemblies that may be located several feet apart. The CRTs thus may be separately mounted in display panels, in camera or recorder structures, or other locations with restricted mounting space. The electronics assemblies are rack mounted chassis that contain low and high voltage power supplies, magnetic deflection amplifiers, video amplifiers, and low level correction and linearization circuits. An attractive metal cabinet is optionally available (see figure).

PRECISION DISPLAY COMPONENTS

High voltage supplies, deflection amplifiers, video amplifiers, linearization circuits, and precision adjustable tube mounts are separately available for OEMs who integrate precision CRT displays into their end products.

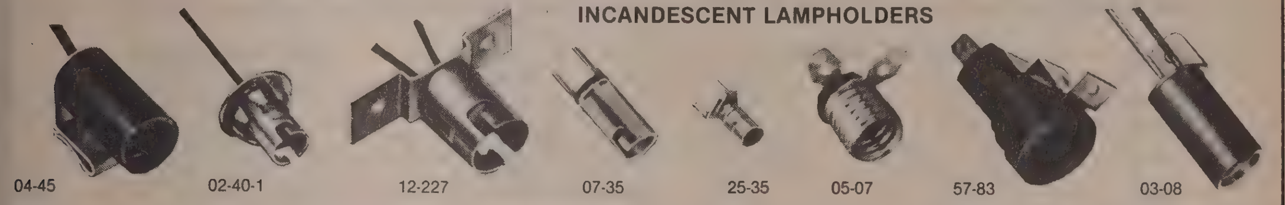
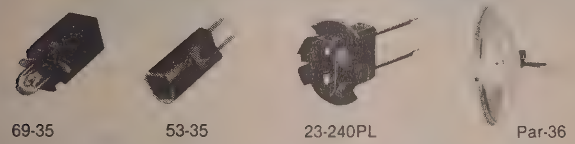
LAMPHOLDERS • INDICATOR LIGHTS • LED DEVICES

INCANDESCENT LAMPHOLDERS



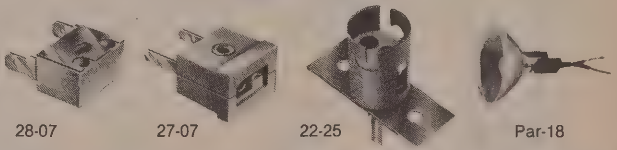
Leecraft lampholders are available in a full range of sizes from Midget through Intermediate bases. Hundreds of bracket styles, suitable for most applications, are available from stock. The illustrations shown are just a few of the standard designs Leecraft has manufactured for over 40 years. Special assemblies or mounting systems to specification are available on order.

WEDGE BASE LAMPHOLDERS



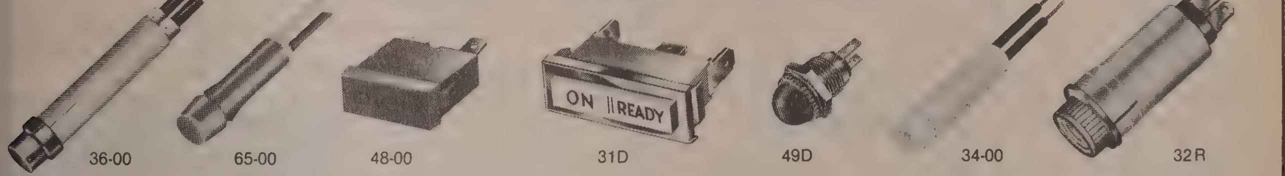
Wedge base lampholders and lamps offer the designer new ways to save time, money, weight and space. Brackets are available to accommodate comparable bayonet and screw base types. The Reflector-Light Par-36 high illumination reflector system is another important example of the wedge base concept at work — also available in Halogen.

HALOGEN CYCLE LAMPHOLDERS



Halogen Cycle lamps and lampholders have the distinct advantages of high light output, efficiency and small size. The new, Par-18, Bi-pin high illumination Reflector-Light is one of many Halogen applications with extended useful lamp life and continued reliability through quality construction — also available in incandescent and wedge base.

NEON AND INCANDESCENT INDICATOR LIGHTS



Leecraft indicator light assemblies are available with low voltage incandescent lamps and up to 600 Volts neon. All standard colors may be selected. Most types are supplied with either tab terminals or 6" wire leads. While front mount is more common, rear mount styles are also available. The 31 Series shown above is available with dual colors and two units may be stacked for a double dual indicator in a single mounting hole. The 65-00 and 32-00 snap-fit standard 5/16" and 1/2" mounting holes respectively. Others are a press fit with speed nut supplied for additional security. Most popular types are available from stock. (UL/CSA may be specified).

Leecraft also produces a full and versatile line of packaged and discrete hi-brightness LEDs. Shown above are some of the most popular styles, many of which snap fit into panels. Mounting hardware may also be ordered, if needed. Value added assemblies include flexible wire leads, internal or external dropping resistors, spacers, etc. Various sizes and styles of PC Board status or "no fault" LED Indicators are also available. GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

AMP OPTIMATE DNP (Dry Non-Polish) Fiber Optic Connectors

For 1000 micron plastic fiber cable

AMP OPTIMATE DNP Fiber Optic Connectors provide low cost optical terminations for fiber with a typical data rate and run length of approximately 10 megabits and 20 metres (78.7 feet) respectively. Data rate and length are a function of specific data link design. The connectors are designed for simple assembly; no special tools are needed. The cable is simply cut and stripped of jacketing, pushed through a plug assembly, and excess fiber cut away. There is no adhesive required, thereby facilitating easy field assembly.

Request Catalog No. 81-619

Optical Waveguide Designers' Kit (Dry Non-Polish) Part No. 228084-1

This kit contains a sufficient quantity of field appliable components, five metres of 1000 micron plastic fiber and commonly available tools for achieving high quality terminations. Use the kit in conjunction with appropriate low cost active devices to construct point-to-point, simplex and duplex systems.

Characteristics

Mechanical

Lateral misalignment: Not to exceed .8 µm

Angular misalignment: Maintained to less than .5°

Fiber strain relief: Produced by using adhesive to cement the buffer jacket inside the ferrule (up to 4 lbs.) and cementing the Kevlar to the connector (up to 20 lbs.)

Fiber positioning: Provided by mechanical centering and swaging of the cladding with a precision of .8 µm

Optical

Repeatability: The ruggedness and the high precision of both the ferrules and the alignment sleeves guarantees a reproducibility of the insertion loss with ± .15 dB on the same pair and ± .2 dB on any unmatched pair

Environmental

Temperature: An extremely low coefficient at expansion for the ferrule material allows constant performances from -20° C to +80° C.

Aeroflex *brushless dc motors and torquers*

We're more than just a motor company

State-of-the-art design backed by 25 years of engineering and field experience . . . Aeroflex motors and torquers are working, accurately and reliably, in the most difficult military, aerospace and industrial applications. Time and again they have proven how well they can perform in hostile environments on land, sea or in the air . . . in outer space or in the ocean's depths.

Aeroflex fractional and subfractional H.P. brushless D.C. motors offer equal — or better — performance than brush motors, with no compromise in size. They are ideal for those special applications where environment, service life or other brush motor limitations cannot be tolerated. Their high torque-to-inertia ratios, excellent heat transfer characteristics, high efficiencies (75%) and freedom from downtime make them a cost effective choice.

Aeroflex torquers are designed and built for the same demanding kind of use. They're available from 1" O.D. to 24" O.D. in torques from tenths of an oz.-in. to hundreds of ft.-lbs. With designs like this in stock, it's usually a simple matter to meet your application needs.

Should you require a special motor or torquer, we'll work to your specification or help you develop one that meets your need. We can also help you with the electronic drive interface, or even provide the complete electronic/motor assembly.

We're more than just a motor company.

SLIP RINGS FOR MILITARY VEHICLES

Airflyte Electronics has experience in the design and manufacture of assemblies for personnel carriers, tanks and other military vehicles. We have built slip rings for periscopes, turrets and commander stations. These assemblies range in size from 6″ or less in outside diameter to slip rings with clearance holes larger than 28″. This type of assembly is characterized by its rugged construction, usually has two high power rings, several low power and up to 50 signal rings. Illustrated are several of the configurations we have built in production quantites.

ENCODERS AND SWITCHES

Airflyte encoders and rotary switches feature drum construction with solid gold alloy conducting segments embedded in epoxy and machined flush. Brushes are multi-strand, spring-temper gold-alloy. As small as Size 5.

ENCODERS

A wide variety of encoders is available: T/B, BCD, Gray, etc. Special encoders may require nominal tooling charges. Encoders can be supplied with built-in logic circuitry. Sizes: 8-33

SWITCHES

When close accuracy, repeatability and size are important, specify Airflyte rotary switches for timing and positioning applications. Successfully replaces snap action switches and cams. Pre-set to eliminate installation time. Zero hysteresis.

Illustrated are four miniature capsules which have found wide use in gyro gimbal and instrument applications. The fully enclosed and tested assemblies feature fine diameter gold alloy brushes mated to compatible gold alloy rings for excellent noise characteristics at low torque levels. Although miniature in size, the assemblies are surprisingly rugged and are able to withstand most military environmentel specifications and the sometimes severe use encountered in the laboratory.

A major aerospace company has successfully tested the assembly to the environmental parameters listed below, proving their ruggedness and reliability. All units are factory tested before shipment and a copy of the test data is available with each unit upon request.

CAPSULE SLIP RING ASSEMBLIES
CAY-150 CAY-1120

These assemblies, specially designed for gyro-rate table and centrifuge applications, have found wide use because of their versatility and compact size. The standard assembly, can be supplied (at slight extra cost) with internally shorted rings for double and triple current ratings, and with single, double and triple shielded wire. Featuring gold alloy wire brushes and compatible gold alloy rings, these assemblies are manufactured from proven production tooling at a very nominal cost. Special assemblies with switching circuits and others with non-standard materials for use in severe environments are available.

POWER CAPSULE SLIP RING ASSEMBLIES

DAY-705 DAY-710

These slip-rings are built to your order using many standard components which have proven themselves over many years of reliable operation. The "platter-type" design includes one coin silver ring on each side of each molded sub-assembly; and, leaf type silver graphite brushes which are molded in an insulating block and perfectly matched to the face of each ring. Inasmuch as the assemblies are the stack-up type, we are able to custom build them to your specifications—using our standard components—with a very minimum lead time required.

Similar in construction to our DAY-705, this platter type unit features two coin silver rings on each side of each platter for greater package density, and a "through bore" design which can be used for the passage of fluid or gas lines.

DAY-490 DAY-499

These assemblies, designed for use in commercial equipment, have been used in applications ranging from thermocouples to the transmission of medium power. They feature coin silver rings, silver graphite brushes, convenient terminals on both the slip ring and brush blocks, and a rotor design which allows the leadwires to be exited through the shaft bore, or under the bearing when a shaft clearance hole is required. The wide variety of sizes and configurations available, including "in-between" shaft diameters, allows the designer to select a standard assembly for his application, eliminating time consuming and costly design charges.

CAY-731/CAY-740

For use where bearing mounted assemblies are not practical, the CAY-731/CAY-740 should be specified.

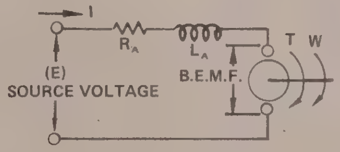
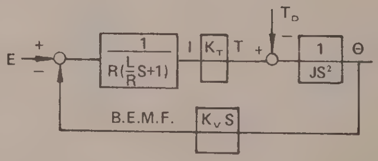
MOTOR EQUATIONS

CIRCUIT



R_A = Armature + Brush Resistance
L_A = Armature Inductance
K_T = Armature Torque Constant (in. oz./amp)
K_V = Motor Back E.M.F. Constant (volts/rpm)
B.E.M.F. = $K_V W$
W = Armature Speed in R.P.M.

SERVO BLOCK DIAGRAM



STEADY STATE EQUATIONS

1. $E = IR_A + K_V W$
2. $T = K_T I$

Substituting for I in equation 1.

3. $E = \frac{T}{K_T} R_A + K_V W$

Transposing:

(a) $W = \frac{E}{K_V} - \frac{T}{K_V K_T} R_A$

(b) $T = [E - K_V W] \frac{K_T}{R_A}$

From the above equations we note that torque speed curves of Bertsch motors are straight lines (linear) with an X (vertical axis = shaft speed) intercept of $W = \frac{E}{K_V}$ and Y (horizontal axis = shaft torque) intercept of $\frac{E}{R_A} K_T$. It should also be noted that the speed regulation capabilities of the motor ($\frac{\delta W}{\delta T}$ E = Constant) is simply equal to $-\frac{R_A}{K_V K_T}$ (rpm/in.-oz.).

TRANSIENT EQUATIONS

The La Place Transform for Bertsch motors is as follows:

$$\frac{\theta}{E} S = \frac{1}{K_V S (\frac{JR_A}{K_V K_T} S + 1)(\frac{L_A}{R_A} S + 1)}$$

$$\frac{JR_A}{K_V K_T} > \frac{L_A}{R}$$

θ = Shaft Angular Position
J = Armature & Load Inertia
R_A – Armature & Source Resistance
L_A = Armature * Source Inductance
T_D = Disturbance Torques
S = La Place Operator

Additional information on Bertsch motor equations and performance characteristics are available upon request.

MOTOR THERMAL EQUATIONS

1. $T_A = T_{AM} + P_L \theta_R$
2. $P_L = I^2 R_A = \frac{T^2}{K^2} R_A$
3. $T_A = T_{AM} + T^2 \frac{R_A}{K^2} \theta_R$

T_A = Armature Temperature
T_{AM} = Ambient Temperature
P_L = Power Losses
θ_R = Motor Thermal Resistance (armature to ambient air)

POSITION CONTROL NEW!

ETI SYSTEMS Model 6000 Motorized Position Control Is A Self-Contained, High Performance Servo Control System

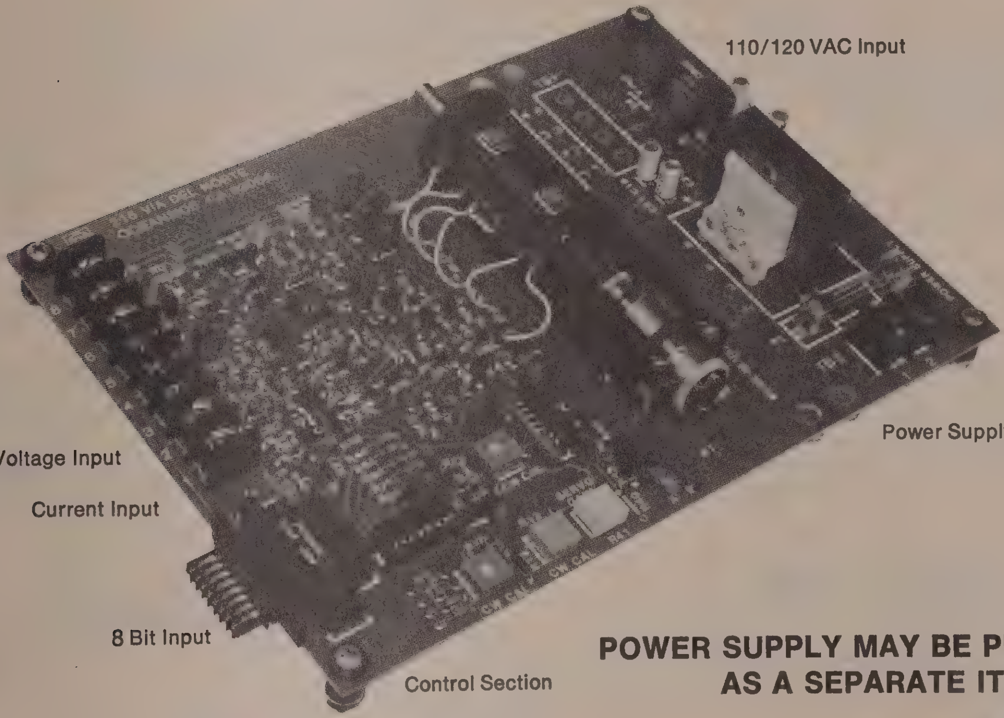
Input control is achieved by one of these modes:

Voltage Input:	0 to 5 or 0 to 10 Volts D.C.
Current Input:	4 to 20 milliamps. This mode has a signal sensor that inhibits control if signal falls below 4 milliamps.
Digital Input:	8 bit with strobe.

Positional accuracy of less than 2% of full scale (less than 1% on some models depending upon motor speed and pot resolution).

Input power to power supply is 110/120 VAC 50/60 Hz at 25 Watts, outputting to control ±15 VDC and +5 VDC regulated.

Servo inhibit and run output are available to disable servo control and indicate when motorpot is positioning respectively.



POWER SUPPLY MAY BE PURCHASED AS A SEPARATE ITEM

CONTACTS

GRAPHALLOY, because of its inherent non-welding and arc-quenching characteristics, is used widely for contacts. Ask for Data Sheet 950.

BUSHINGS, Oil-free

Replace oil-lubricated bushings in synchros, instruments, timers and missiles.

Advantages: 1) Lower friction at room temperatures. 2) No oil to solidify at low temperatures. 3) No oil to carbonize at prolonged elevated temperatures.

*Ask for Data Sheets 270 and 277 on Miniature Bronze-*GRAPHALLOY *Bushings.*

CONNECTORS (garter springs)

These silver-plated coil spring Connectors make for positive electrical connection to the brass body of the brush holder by snapping into the groove on the holder. The connecting lead can be pre-soldered to the Connector.

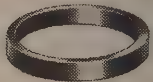
SLIP RINGS
Solid Coin Silver

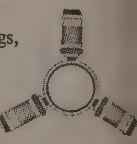
Standard Coin Silver Slip Rings, both *cylindrical* and *flat* types, are illustrated at right. We recommend the cylindrical type rings with three brushes per ring . . . spaced at 120°. The cylindrical type are designed for press fitting over standard steel shafting. The flat type rings are designed for nesting either on an insulated plate or for molding into insulation. Insulated slip rings of either type or slip-ring assemblies can be furnished with leads attached.

No. 168 Series flat type to 20" O.D.

Standard "Flat" rings have ¼" ra dial contact surface and ⅛" radia spacing between adjacent rings.



No. 116 Series cylindrical typ to 36" O.D.



Copper Slip Rings, flat or cylindrical, are available.

Magnetic Technology®

High Performance DC Torque Motors

Brush type and Brushless, More than 500 standard models

Magnetic Technology® offers designers the broadest standard line of high performance DC torque motors, as well as exotic one-of-a-kind units. These motors are produced to the most exacting reliability and performance standards, and have been proven in aerospace, ground-based and undersea applications.

Magnetic Technology® has paced the industry with developments such as 40 million oz-in/sec² power rate motors, ultra light-weight units for deep space use, 500°F temperature rated motors and compact units for implanted cardiac assist systems.

MAGTECH® DC torque motors combine high ratios of torque to power, speed and size with other desirable characteristics such as low electrical time constant and low ripple torque.

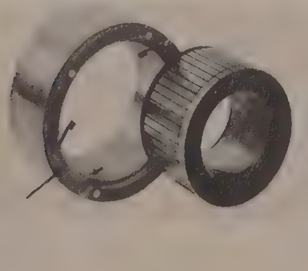
Typical high performance units



These permanent magnet, armature excited motors are furnished frameless for direct mounting to the driven load without gears. Large bore, minimum width and thin-ring configurations make possible compact system packaging.

Peak torque ratings of standard models range from 7 oz-in. to more than 120 lb-ft., OD's from 1.5 inches to more than 19 inches, and armature bores to more than 10 inches. Special designs may be furnished to meet specific customer requirements.

Brushless motors are continuous rotation type that have advantages over conventional brush-type DC torque motors in some applications.

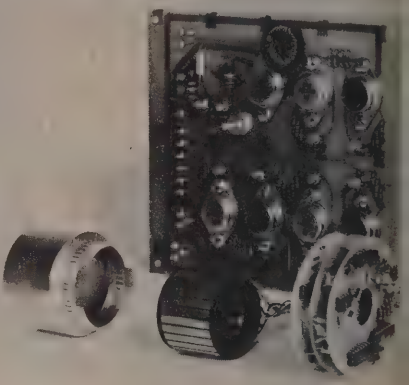
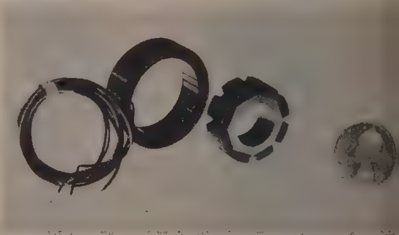
Special Products

Magnetic Technology® also produces linear actuators, and a wide variety of custom devices including the examples below.

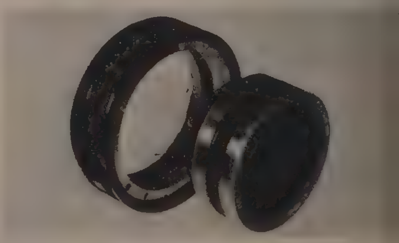


High Efficiency Brushless Motor System. The model 2250-150 operates at 1100 rpm with a 20 oz-in load. The overall system efficiency is above 70% for all input voltages between 18 and 32 volts and at temperatures between −55°C and 85°C.



Rare Earth Brushless DC motor. Special motor developed for use as cardiac assist incorporating rare earth magnets to prevent alteration of motor characteristics in case of over current. Motor designed for maximum efficiency, i.e. lowest temperature rise under continuous load conditions.

Limited Angle Brushless DC Torquers



Precision Motor Tachometer

Magnetic Technology®

Tachometers

Any of the more than 500 standard MAGTECH® torque motors may be operated as a tachometer generator. In addition, separate product ines of precision tachometers and ndustrial tachometers are available. These range from .05% ripple voltage units usable at rates less than one revolution per day and units with a 50,000:1 dynamic range, to popular industrial units.

These tachometers feature open, frameless configuration for direct drive mounting. The direct mounting without gears eliminates dead zones and inaccuracies that can result from gearing backlash and gear imperfections. Typical characteristics include high voltage gradient, low time constant, high coupling stiffness and resolution, and accuracy at low speeds.

Industrial DC Servo Motors

Brushless and Brush-type, Frameless or Housed, Motor-Tach Combinations

Only subtle design, performance and materials variations distinguish these quality, direct drive motors from Magnetic Technology's® established military grade motors. Yet, through volume production they are priced for industrial applications.

Features include fast response, high torque, precise positioning, high tracking accuracy, quiet operation, and relatively low ripple. These DC servo motors utilize a permanent magnetic field for higher efficiency plus a moving iron armature for maximum thermal inertia.

The motors are available in frameless configuration to allow compact packaging and mounting of the armature directly on the driven load. Housed units, with shaft and bearings also are available. Direct coupling to the driven load eliminates the disadvantages of gears and couplings in servo systems. System simplification is possible and excellent system stability results.

Magnetic Technology®

Applications for these units include disc memory systems, card sorters, tape transports and printers, N.C. machine table drives and feedback tachometers.

Continuous rotation brushless units, for constant or variable speed operation, also are available. Electronic drive and control systems can be supplied with these units.

In addition to MAGTECH® industrial servo motors and tachometers, motor-tach combinations can be supplied. A number of standard combinations are available, but virtually any motor and tachometer can be combined to meet drive and tachometer sensitivity requirements. The combination unit is smaller, lighter, easier to mount and generally lower in cost than separate units. These units aid reduction of system resonances.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

Tachs, Servomotors, Motor-Generators.

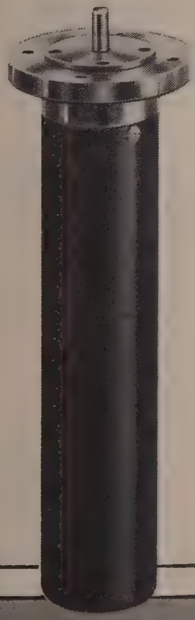
dc tach generators

Servo-Tek tachometer generators are built to last. With silver-alloy commutators, stainless-steel shafts and bearings, brushes designed for 100,000-hour life, temperature compensation, and full factory run-in, our tachs deliver stable, long-term performance. A complete line, encompassing a variety of mechanical and electrical characteristics, is available in regularly-stocked units. Output ratings from 1 to 45 V/1000 rpm.

dc servomotors

Permanent-magnet Servo-Tek servomotors give you maximum performance with minimum maintenance. With silver-alloy commutators, stainless-steel shafts and bearings, heavy Isomid magnet wire on Teflon-insulated armature, extended-life brushes, and aluminum housings, our servomotors are highly reliable and long-lasting. Standard units are available in a wide range of speed, torque (up to 2 oz/in. ungeared, 300 oz/in. with integral gearing), and voltage combinations to suit the individual application.

dc motor-generators



Our dc motor-generators combine high-performance Servo-Tek servomotors with our long-life tachometer generators—both mounted on a common shaft. (Integral spur-type gear reducers are added where required.) Motors are available in any specified voltage, tachs with outputs up to 10 V/1000 rpm, and gear reducers in ratios from 4.3:1 to 7,200:1.

incremental encoder option

The incremental encoder option, available on any Servo-Tek 1.135"-diameter dc tach generator, servomotor, or motor-generator, provides a 3-channel (2 in quadrature and 1 index) LSTTL logic output—adding digital position and direction feedback. Supplied in various incremental outputs from 100 to 512 pulses per revolution, this low-cost option operates on a 5Vdc supply. Comes complete with 2-foot, 10-conductor ribbon cable and polarized connector.

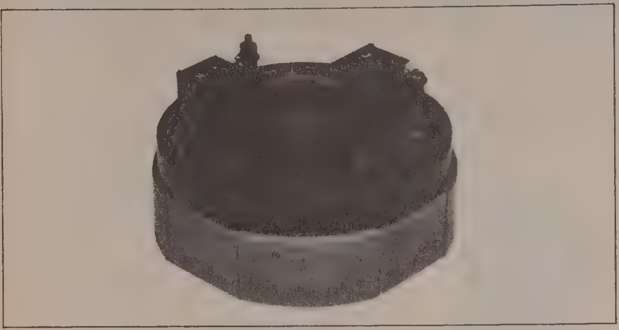
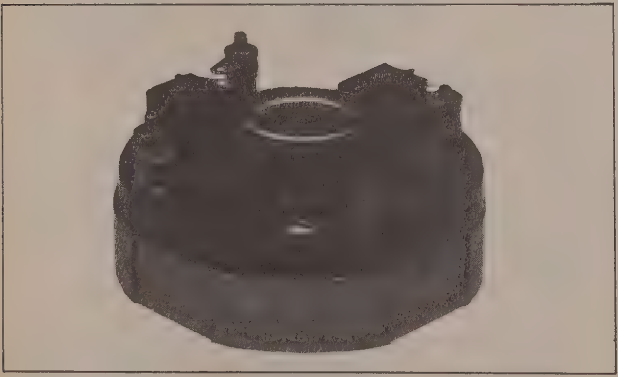
D.C. TACHOMETER GENERATORS



SERIES 402

707 01A
NO 2362
Sierracin Magnedyne

SERIES 707-01



SERIES 435

The D.C. tachometer generator is a servo control device which converts mechanical rotation into an electrical signal. Attached directly to the driving shaft, eliminating the need for gearing, the tachometer functions as a rate reference in rate servo systems and for velocity damping in position servo systems. The high voltage gradient available from these tachometers significantly reduces signal to noise and drift problems and allows higher gain systems providing more precise servo control. The extremely low ripple and high linearity of Sierracin / Magnedyne tachometers have made them the standard of the industry for machine tool control. Frameless units, requiring very little space, offer great flexibility and adaptability in application. Housed models, as well as housed D.C. torque motor/tachometer combinations coupled on a common shaft are also available.

The illustrated frameless models are representative industrial / commercial tachometers. They are supplied with cartridge type brushes for long life and with air stabilized permanent magnet fields which minimizes assembly and disassembly problems.

The center illustration, 707-01, is a separate moving coil tachometer designed for use in applications requiring high quality velocity feedback with minimum system inertia load. Available in 3 volts/1,000 rpm output, inertia is $9X16^{-5}$ oz-in/sec^2 and ripple is 1.5% max (peak to peak). Normally available for delivery from stock.

Larger sizes, up to 12.5″ O.D., with reduced ripple are available for precision applications. Special encapsulated designs to full MIL-SPEC requirements are available in equivalent O.D.'s but with reduced axial length resulting in lighter weight units for aerospace applications.

The basic simplicity of our designs and our production experience have put Sierracin / Magnedyne tachometers in major defense programs, in addition to the many industrial and process control applications.

Rapid prototype deliveries on illustrated models.

Sierracin/Magnedyne has always used state-of-the-art technology to meet more demanding performance requirements. Samarium Cobalt magnets, with an energy product over three times that of Alnico, further advances the technical superiority of D.C. torquers and D.C. brushless motors. Overcurrent conditions will not demagnetize SmCo magnets and these motors do not require keepers, simplifying installation procedures. Further advantages are higher torque to power ratios and higher peak torque for equivalent size and weight.

Representative models of Samarium Cobalt torque motors and D.C. brushless motors are listed below.

We can assist with your specific design problems and goals. Our computerized design programs enable rapid response and optimization of your desired parameters. CALL US TODAY (619) 438-3321.

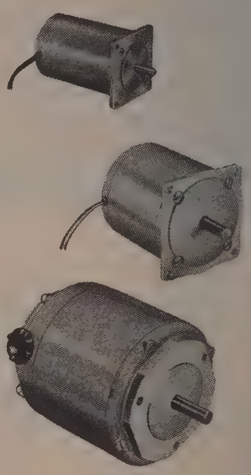
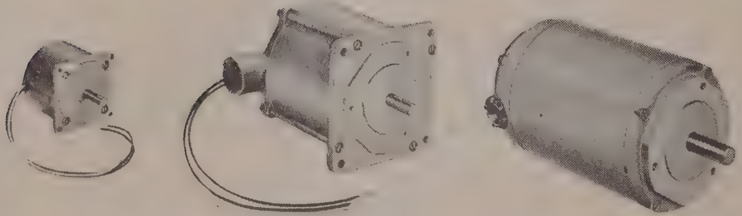
SLO-SYN® *Synchronous / Stepping Motors*

M SERIES SLO-SYN STEPPING MOTORS – Permanent magnet stepping motors that provide high torque-per-pound and torque-to-inertia ratios and can be driven at rates above 20,000 steps per second with low power input. Standard drives available for rates to 10,000 steps per second with higher rates available on special order. Motors have Class B insulation and can be operated at ambient temperature range of −40°C to +65°C. Continuous duty temperature rise is 65°C. Standard M Series SLO-SYN motors are offered in step angles of 0.72°, 1.8°, 2.5°, 5° and 15° with choice of either ±5% or precision ±3% accuracies noncumulative. The step angles can be electronically halved using appropriate half step drives. Holding torque ratings from 53 to 3000 oz-in are available. The motors have no brushes, ratchets or gears and use shielded ball bearings to insure reliability and long life.

DAMPED MOTORS – Standard viscous damped motors and special order motors having integrally mounted Lanchester dampers are available.

SPECIAL DUTY TYPES – For special duty applications, inquire for available double-end shaft, high temperature, vacuum, radiation resistant, militarized, 8-lead/terminal, and encoder stepping motors.





SLO-SYN SYNCHRONOUS MOTORS – Permanent magnet a-c motors having extremely rapid starting, stopping and reversing characteristics and a slow basic shaft speed of 72 rpm synchronous with a line frequency of 60 hertz. These types need only a single-pole, three-position switch for complete forward, reverse and "off" control. No excessive inrush current when energized because starting and operating current are nearly identical. Can be completely stalled without overheating and with no harmful effects on components. Start or stop in less than 5° of shaft rotation; no need for mechanical or electrical braking. When used with an auxiliary high speed motor, the SLO-SYN motor can remain coupled to the load and safely overdriven. Phase shifting resistor and capacitor must be used when operating from a single-phase source but not from two-phase. All standard motors are rated for continuous duty at maximum ambient temperature of 65°C. All models have Class B insulation.

SLO-SYN® Stepping Motor Controls

SLO-SYN Stepping Motor Controls meet the need for controls that are easily interfaced with minicomputers and microprocessors and allow system design flexibility.

NEW MODULYNX™ MOTION CONTROLS – *Offer a modular, building block approach to step motor control system design. Each system function is on a separate circuit card to permit selection of only the cards necessary to provide features required. Some available cards include a 200 W driver, 1/10 and 1/16 microstep, digital indexer, and an IEEE 488 interface. Inquire about complete offering.*

SLO-SYN® TRANSLATORS – Convert pulses from a minicomputer, microprocessor or other pulse source into the switching sequence needed for bidirectional control of SLO-SYN Stepping Motors. Stepping rate, direction and number of steps taken are controlled by external logic. The translator will drive the motor one step for each pulse received from the external source. **Translator Modules** are printed circuit boards which contain the sequencing and switching logic for stepping motor control and are used where the control must be installed on a circuit card rack in the users equipment. The STM101 Translator Module will drive a SLO-SYN motor at rates to 1000 full steps per second and the STM103 provides rates to 3000 full steps or 6000 half steps per second. Both types require a separate power supply. The SLO-SYN Power Supplies listed on this page are recommended. **Open-Chassis Translator** type TB105 includes the power supply as well as sequencing and switching logic and will drive a SLO-SYN motor at rates to 5000 full steps or 10,000 half steps per second. **Packaged Translator** types ST101, ST103 and ST105 contain all needed power supply, sequencing and switching circuits and are mounted in attractive, sturdy cabinets. Maximum speed is 1000 full steps per second for the ST101, 3000 full steps or 6000 half steps per second for the ST103, and 5000 full steps or 10,000 half steps per second for the ST105. **High Power Translators** types TC600 and TM600 provide rates to 10,000 full steps or 20,000 half steps per second. The TC600 consists of three printed circuit boards and requires an external power supply. The TM600 is an open chassis unit with an integral power supply.

SLO-SYN® BUFFERED TRANSLATORS – Accept pulses from a fixed high rate or a random rate pulse source and automatically ramp the pulse rate to accelerate and decelerate the motor. A buffered translator will drive a motor one step for each pulse received from the external source. **Type BUF105** is an open chassis model which will operate a SLO-SYN Stepping Motor at rates to 5000 full steps or 10,000 half steps per second. **The SB105** is similar, but is installed in a cabinet designed for bench, shelf or 19-inch (483mm) rack.

SLO-SYN® PRESET INDEXERS – Provide control of step rate, direction and distance without external logic. They incorporate oscillators and counting circuits to provide the pulses and keep track of the number of pulses given to the motor. **SLO-SYN Preset Indexer Modules** are printed circuit boards containing the needed logic but not including the power supply. These units are used where the control is to be mounted in a circuit card rack in the users equipment. A SLO-SYN Power Supply is recommended, but other supplies which meet the power specifications of the specific Preset Indexer Module can be used. The PIM151 Preset Indexer Module provides stepping rates to 1000 full steps per second and the PIM153 offers stepping rates to 3000 full steps or 6000 half steps per second. Both types are directed by external switches. The PIM153 also permits count selection using voltage levels. **Open-Chassis Type TBM155** will drive a SLO-SYN Motor at rates to 5000 full steps or 10,000 half steps per second. Index count and other control functions can be generated using external switches or voltage levels. Acceleration and deceleration can be adjusted to match the characteristics of the motor and load. **Packaged Types ST151, SP153A, and SP155A** are mounted in attractive cabinets which allow mounting on a bench or shelf or in a 19-inch (483mm) rack. All three can be directed from switches on their front panels. The SP153A and SP155A can also be controlled from external switches or voltage levels. Speed capabilities range up to 5000 full steps or 10,000 half steps per second. **A Switch Kit** is available which provides the BCD logic switch and other switches needed for controlling modular and open-chassis preset indexers. Can also provide external control of packaged models.

SLO-SYN® POWER SUPPLIES – Open-chassis, base-mounting power supplies for use with SLO-SYN Translator Modules and Preset Indexer Modules. The module can be installed remote from the power supply or can be mounted on the power supply chassis to form a single unit. Models are available for operation from 120 VAC or from 220/240 VAC power.

**1/4″ dia. shaft units limited to 600 oz. in. maximum continuous duty torque. Use 5/16″ dia. shaft if torque requirements exceed this value.

Max. Cont. Torque: The values in this column are based upon geartrain strength and capability for 1000 hrs. minimum life.
Max. rated torque of motor selected x torque multiplier ratio must not exceed these values.
Max. Intermittent Torque = 2 x Max. Cont. Torque.
Momentary Stall Torque = 5 x Max. Cont. Torque.
Minimum Efficiency = Torque Multiplier Ratio divided by Speed Reduction Ratio x 100.

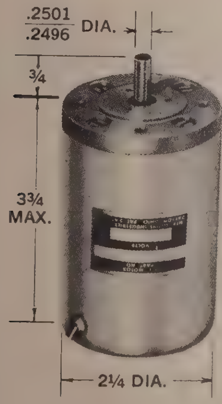
Type GRP Basic Motor



Type GRP precision permanent magnet d.c. motors provide extremely high output and efficiency for their frame size. This unit is designed to meet the requirements of MIL-M-8609; however, designs exceeding this specification to meet customer controlled applications are common. Various standard armature windings make it possible to furnish a wide range of speed and torque characteristics.

CMM

Type CLL and CMM gearmotors are of the same high quality construction as TRW MM and LL gearmotors and provide the same outstanding performance characteristics although NOT designed to meet MIL-specs for environmental protection. These gearmotors are specifically designed for application where small size, reliability and high torque are desired.

Type CMM and CLL gearmotors are rugged, high-quality units combining Type CMM and CLL commercial motors with a proven planetary geartrain offering 83 standard speed reduction ratios from 4:1 to 46,656:1 with maximum continuous torque from 3.0 to 1250 oz. in. Since the geartrain is of modular design, literally thousands of special ratios can be furnished.
